

Air France is launching with the Solar Impulse Foundation a partnership dedicated to **sustainable aviation**.

The purpose of the Solar Impulse Foundation is to select and promote 1,000 solutions to protect the environment, in all areas. The search for innovation in the aviation industry will focus on 4 main areas:

CO₂
EMISSIONS

ENERGY
EFFICIENCY

NOISE
REDUCTION

THE CIRCULAR
ECONOMY

Innovations are examined by experts, and those that prove both their **ecological benefit** and their **economic viability** will be awarded the « **Solar Impulse Foundation** » label.

Among these clean, efficient and economically feasible solutions, Air France will implement those which are relevant to its activities. All of them will be made available to the aviation industry as a whole, to build a more sustainable future.

for clean aviation

1,000
solutions

For **Bertrand Piccard**, president of the Solar Impulse Foundation, initiator and pilot of Solar Impulse, the very first airplane capable of flying perpetually without fuel :

“ Numerous clean and profitable solutions already exist to make aviation more sustainable. We want to promote and implement them at scale in the air and on the ground. This is precisely the objective of our partnership with Air France who is committed to taking the lead in the future of clean aviation. The Solar Impulse Foundation is dedicated to helping them get there. ”

Acting together to ensure a responsible travel experience
